

The Muninn Project

<http://www.muninn-project.org/>

- Extract information from First World War archives and create linked open data.
- About 2M digital images. More to come.
- SharcNet support.
- Maps, Letters, Forms, Diaries and Personnel and Medical Records.
- Use Foaf, geo tagged locations, dbpedia linkages, etc...
- Interesting modeling problems:
 - People, Documents about people(s), Bits of documents about people(s).
 - Big temporal modeling component e.g.: A happened before B, but no known timestamp.
 - Maddening levels of details. (Belief, Time, Annotation, Agent)
